

Gold Is Green: Sustainability in the Golden Triangle

The Golden Triangle recently became **the 1st BID in the world** to achieve **LEED Platinum** certification under the LEED for Communities program.

67 buildings with a total of 45% of all building space in the BID (or 16M sq ft) **are now LEED certified.**

22 buildings in the BID have **green roofs**, and **9 have rooftop gardens.** Twelve properties offer other green features like beehives, solar panels, or living walls.

This “green wall” enlivens the lower level lobby of 800 17th Street NW. The living plants filter indoor air and reduce ambient noise.

The SEIU building at 1800 Massachusetts Ave has one of the largest green roofs in downtown, at 12,400 sq ft. It is also LEED Platinum certified.
